CHAPTER 1 *A Short Introduction to Probability* ***1***

Probability **1**
Axioms of probability ***1***
Subjective and objective probability ***2***
Conditional probability **3**
Bayes' rule ***4***
Discrete and continuous random variables **5**
Distributions and cumulative density functions ***6***
Expectation of a random variable ***6***
Properties of expectations ***7***
Properties of variance ***8***
Standard distributions **8**
Common discrete distributions: Bernoulli, Binomial, Geometric, and Poisson ***8***
Common continuous distributions: Uniform, Gaussian, Exponential, and Power-Law ***10***
Useful theorems **14**
Markov's inequality ***14***
Chebychev's inequality ***15***
Strong law of large numbers ***15***
Central limit theorem ***16***
Jointly distributed random variables **16**
Bayesian networks ***17***
Exercises **19**

CHAPTER 2 *A Review of Statistics* ***21***

Background **21**
Moments ***21***
Moment generating functions ***22***
Properties of moment generating functions ***23***
The normal distribution revisited ***24***
The Central limit theorem ***25***
Sampling a population **26**
Types of sampling ***27***
Scales ***28***
Outliers ***28***
Describing a sample parsimoniously **28**
Tables ***29***
Bar graphs, Histograms, and Cumulative Histograms ***29***
The sample mean ***30***
The sample median ***32***
Measures of variability ***33***
Inferring population parameters from sample parameters **34**
Testing hypotheses about outcomes of experiments **37**
Hypothesis testing ***37***
Errors in hypothesis testing ***38***
Formulating a hypothesis ***38***
Comparing an outcome with a fixed quantity ***39***
Comparing outcomes from two experiments ***40***
Testing hypotheses regarding quantities measured on ordinal scales ***42***

Fitting a distribution ***44***
Power ***46***
Independence and dependence: regression, and correlation **47**
Independence ***47***
Regression ***48***
Correlation ***50***
Comparing multiple outcomes simultaneously: analysis of variance **53**
One-way layout ***54***
Multi-way layouts ***56***
Design of experiments **56**
Dealing with large data sets **57**
Common mistakes in statistical analysis **58**
What is the population? ***58***
Lack of confidence intervals in comparing results ***58***
Not stating the null hypothesis ***59***
Too small a sample ***59***
Too large a sample ***59***
Not controlling all variables when collecting observations ***59***
Converting ordinal to interval scales ***59***
Ignoring outliers ***59***
Further reading **59**
Exercises **60**

CHAPTER 3 *Essentials of Linear Algebra* ***63***

Vectors and matrices **63**
Vector and matrix algebra **64**
Addition ***64***
Transpose ***64***
Multiplication ***64***
Square matrices ***65***
Exponentiation ***66***
Linear combinations, independence, basis, and dimension **66**
Linear combinations ***66***
Linear independence ***67***
Vector spaces, basis, and dimension ***67***
Solving linear equations using matrix algebra **68**
Representation ***68***
Elementary row operations and Gaussian elimination ***68***
Rank ***70***
Determinants ***71***
Cramer's theorem ***72***
The inverse of a matrix ***72***
Linear transformations, eigenvalues and eigenvectors **73**
A matrix as a linear transformation ***73***
The eigenvalue of a matrix ***74***
Computing the eigenvalues of a matrix ***76***
Why are eigenvalues important? ***77***
The role of the principal eigenvalue ***78***
Finding eigenvalues and eigenvectors ***79***
Similarity and diagonalization ***80***
Stochastic matrices **82**
Computing state transitions using a stochastic matrix ***82***
Eigenvalues of a stochastic matrix ***83***

Exercises **84**

CHAPTER 4 *A Tourist's Guide to Optimization* ***87***

System modelling for optimization **87**
Optimization ***87***
An example **88**
Optimizing linear systems **91**
Solving a linear system using simplex **93**
The complexity of LP ***93***
Using linear programming **94**
Network flow ***94***
Integer linear programming **95**
Total unimodularity ***97***
Using integer linear programming **97**
Weighted bipartite matching ***97***
Dynamic programming **98**
Nonlinear constrained optimization **100**
Lagrangian techniques **100**
Karush-Kuhn-Tucker conditions for nonlinear optimization **101**
Heuristic optimization **102**
Exercises **104**

CHAPTER 5 *Signals, Systems, and Transforms* ***107***

Introduction **107**
Background **107**
Sinusoids ***107***
Complex numbers ***109***
Euler's formula ***109***
Discrete-time convolution and the impulse function ***111***
Continuous-time convolution and the Dirac delta function ***113***
Signals **115**
The complex exponential signal ***116***
Systems **117**
Types of systems ***118***
Analysis of a linear time-invariant system **118**
The effect of an LTI system on a complex exponential input ***119***
The output of an LTI system with a zero input ***120***
The output of an LTI system for an arbitrary input ***121***
Stability of an LTI system ***122***
Transforms **122**
The Fourier series **123**
The Fourier Transform **126**
Properties of the Fourier transform ***128***
The Laplace Transform **131**
Poles, Zeroes, and the Region of convergence ***132***
Properties of the Laplace transform ***133***
The Discrete Fourier Transform and Fast Fourier Transform **136**
The impulse train ***136***
The discrete-time Fourier transform ***136***

Aliasing ***137***
The Discrete-Time-and-Frequency Fourier Transform and the Fast Fourier Transform (FFT) ***140***
The Fast Fourier Transform ***141***
The Z Transform **143**
Relationship between Z and Laplace transform ***145***
Properties of the Z transform ***146***
Further Reading **148**
Exercises **148**

CHAPTER 6 *Foundations of Queueing Theory* ***151***

Overview **151**
A general queueing system and notation ***152***
Little's law ***152***
Stochastic processes **153**
Discrete and continuous stochastic processes ***154***
Markov processes ***155***
Homogeneity, state transition diagrams, and the Chapman-Kolmogorov equations ***155***
Irreducibility ***157***
Recurrence ***157***
Periodicity ***158***
Ergodicity ***158***
A fundamental theorem ***158***
Stationary (equilibrium) probability of a Markov chain ***158***
A second fundamental theorem ***159***
Mean residence time in a state ***160***
Continuous-time Markov Chains **160**
Markov property for continuous-time stochastic processes ***161***
Residence time in a continuous-time Markov chain ***161***
Stationary probability distribution for a continuous-time Markov chain ***161***
Birth-Death processes **162**
Time-evolution of a birth-death process ***162***
Stationary probability distribution of a birth-death process ***163***
Finding the transition-rate matrix ***163***
A pure-birth (Poisson) process ***165***
General equilibrium solution for a birth-death process ***166***
The M/M/1 queue **167**
Two variations on the M/M/1 queue **170**
The M/M/ queue: a responsive server ***170***
M/M/1/K: bounded buffers ***171***
Other queueing systems **173**
M/D/1: deterministic service times ***173***
G/G/1 ***173***
Networks of queues ***173***
Exercises **174**

CHAPTER 7 *Game-theoretic concepts* ***177***

Concepts and terminology **177**
Preferences and preference ordering ***177***
Games, players, and actions ***179***
Strategies ***180***
Normal- and extensive-form games ***181***
Response and best response ***183***

Dominant and dominated strategy ***183***
Bayesian games ***184***
Repeated games ***185***
Solving a game **185**
Solution concept and equilibrium ***185***
Dominant strategy equilibria ***186***
Iterated removal of dominated strategies ***187***
Maximin equilibrium ***187***
Nash equilibria ***189***
Correlated equilibria ***190***
Other solution concepts ***192***
Mechanism design **192**
Examples of practical mechanisms ***192***
Three negative results ***192***
Two examples ***194***
Formalization ***195***
Desirable properties ***196***
Revelation principle ***196***
Vickrey-Clarke-Groves mechanism ***197***
Problems with VCG mechanisms ***199***
Limitations of game theory **200**
Exercises **200**

CHAPTER 8 *Elements of Control Theory* ***203***

Introduction **203**
Overview of a Controlled System **203**
Modelling a System **205**
Modelling approach ***206***
Mathematical representation ***206***
A First-order System **209**
A Second-order System **211**
Case 1: - an undamped system ***211***
Case 2: - an underdamped system ***212***
Critically damped system () ***213***
Overdamped system () ***213***
Basics of Feedback Control **214**
System goal ***215***
Constraints ***216***
PID Control **217**
Proportional mode control ***218***
Integral mode control ***218***
Derivative mode control ***219***
Combining modes ***220***
Advanced Control Concepts **220**
Cascade control ***220***
Control delay ***221***
Stability **223**
BIBO Stability Analysis of a Linear Time-invariant System ***224***
Zero-input Stability Analysis of a SISO Linear Time-invariant System ***226***
Placing System Roots ***227***
Lyapunov stability ***227***
State-space Based Modelling and Control **229**
State-space based analysis ***229***

Observability and Controllability ***230***
Controller design ***230***
Digital control **232**
Partial fraction expansion **233**
Distinct roots ***233***
Complex conjugate roots ***234***
Repeated roots ***234***
Further reading **235**
Exercises **235**
Solutions to Exercises 237
Probability **237**
Statistics **239**
Linear Algebra **242**
Optimization **246**
Transform domain techniques **250**
Queueing theory **254**
Game theory **257**
Control Theory **259**
